20kW Diesel Light Tower
More surplus power than any other 20kW light tower, plus single- and three-phase output

- 200,000 lumens with LED fixtures
- Telescoping vertical tower
- True 25kVA/20kW industrial generator
- Switchable 3-phase/1-phase power
- Connections for auxiliary fuel tank

The Wanco® 20kW Light Tower is based on our line of Mobile Generators. This is by far the most powerful light tower on the market today, with more surplus power than any other brand. This industrial light tower lights up your work site and has plenty of power left over for all your field office needs.

**Light Tower**

The telescoping vertical tower rises to nearly 30 feet when deployed. A single electric winch extends the tower. The tower rotates 358 degrees even when deployed, and the lights can be aimed individually without tools. The lights operate at any height.

Industrial-grade light fixtures are heavy-duty, rugged and extremely durable. The LED lights have a 50,000-hour lifespan, significantly reducing the need for maintenance. Replace LEDs after approximately 10 years of use or more.

**Generator**

A true 20 kilowatts, the power system features a rugged Perkins® Tier 4i Flex diesel engine and an oversized Mecc Alte alternator with PMG for superior starting capacity.

The generator features a Deep Sea 7000-series digital controller with a sophisticated level of features and functions. The user-friendly controller displays warning, shutdown and engine status on a heated and backlit display. An emergency-stop button is located on the exterior of the generator enclosure.

The generator enclosure features industrial-grade construction for durability, longevity and reliable operation. A double-wall steel fuel tank is integral and includes connections for attaching an auxiliary tank.

**Environmental**

Exceptional power efficiency and fuel savings create a smaller carbon footprint when compared with other light towers. Low fuel consumption also lengthens run times, greatly reducing refueling and maintenance costs.

Integral sound attenuation provides superior noise reduction — just 59 dBA at 23 feet (7 meters). Built-in fluid containment protects against ground contamination from leaks, spills and drips.
