For more information, call **800.972.0755** or visit wanco.com.

Wireless cellular connection for remote access to Wanco Message Signs

- Web-based remote control
- Can be installed on any Wanco message sign
- Easily connect to one sign or entire fleet
- Choice of cellular plans
- Selection of 4G gateways all with GPS

The Wanco® Modem Package with GPS provides remote access to Wanco Message Signs using an internet-connected computer or mobile device. This allows you to monitor, program and run diagnostics from a central location, command center or even your work truck next to the sign. Wanco Fleet Manager service is included.

Two components are necessary for remote communications: a modem installed on the message sign and an internet connection. The modem is assigned an active data service plan (essentially, a phone number or IP address) that can be called from Fleet Manager.

Wanco supplies the modem and can either provide Wanco Cellular Service or assist in setting up your own service with a cellular carrier of your choice.

Remote access via Fleet Manager provides remote control of the message displayed on the sign, real-time GPS location on an interactive Google map, location history with breadcrumbs, message sign health and more. Operators can check power levels, view alarms and warnings and access accessories such as speed-detection radar and the Wanco Traffic Data Classifier System.

For more information, call 800.972.0755 or visit wanco.com.
