Transform your device management through Fleet Manager

Whether you manage five or five hundred devices, keeping track of your equipment can present many challenges. Wanco® Fleet Manager provides the tools you need to take control of your equipment from anywhere. Using the internet and a secure cellular connection, you can easily configure, organize and monitor your fleet without being physically present at the deployment site.

Tracking

An interactive map provides up-to-date status and location details on all of your Wanco products connected to Fleet Manager. Easily keep tabs on your devices with GPS location markers, battery health indicators, temperature readouts and other telemetry information.

Use Fleet Manager's current and historical data to generate reports that give you a holistic picture of operational health and efficiency over time.

Alerts

Notifications are crucial when a critical change occurs in your device's functionality. Fleet Manager can help by alerting you to changes in your equipment's operational status, orientation and location. Set up geofencing to designate your equipment to a specific area and receive a notification when that boundary is breached. Directions to a particular device can be accessed quickly from your phone.

Remote Operation

When configuring a message sign, speed sign or light tower is inconvenient or dangerous, use Fleet Manager to remotely activate and adjust a device. The user-friendly Fleet Manager interface lets you schedule days and hours of operation. You can also broadcast the same message to multiple signs all at once, such as when a construction detour affects more than one intersection along a stretch of road.

Organization

As your fleet grows, it may become more difficult to track which devices go where. This is when Fleet Manager's organizational tools stand out. Easily monitor any device by giving it a searchable name and assigning it to a mapped work zone, project or group.

Create sub-accounts for customers or project teams, and give groups or individual users specific permissions to access each device. Save time and get more done from wherever you are with Wanco Fleet Manager.
